

BINGO
ZINC

STAINLESS STEEL and ZINC
for maximised truck hygiene and working life.

MONTINI

Technology without problems

BINGO ZINC. Water is no enemy, it's a friend!

BINGO ZINC is **washable throughout, whenever you want** and can be used straight away. It can be safely cleaned also with high pressure washers, because it is **fully hot-dip galvanised** and the electric parts are welded **cable-on-cable** and then protected by sheaths.

Another reason is that the steel used for some of the components is **AISI 316 STAINLESS STEEL**. Thanks to all this, water, far from being an enemy of BINGO ZINC, is actually a friend!

BINGO ZINC. It lasts a lot longer, and it costs a lot less.

BINGO ZINC is fully protected against corrosion, water and rusting. It can be washed whenever you wish and is always ready for use. For all these reasons, it will last a lot longer than standard trucks. So you will find that, in the end, BINGO ZINC is extremely good value for your money.

Washable any time,
including by pressure washer.

BINGO ZINC. Minimised maintenance costs.

BINGO ZINC is fully protected from rusting, with no maintenance or part replacement requirements. Additionally, it has been designed to minimise operating costs.

BINGO ZINC offers unrivalled performance for all those who are after lower costs and maximised efficiency at the same time.

BINGO ZINC. Fully guaranteed.

MONTINI is fully aware of what customers expect: efficiency, safety, and continuous operation with no down-times. This is why MONTINI provides a **warranty of 30 months or 4000 operating hours** for BINGO ZINC. MONTINI: technology with no problems. Always.

MONTINI Super Warranty
at no added cost.

BINGO ZINC. The only available fully hot-dip galvanised truck world-wide.

The hot-dip galvanising process is one of the most effective methods to protect items against corrosion. However, galvanising techniques are not all the same. Unlike other types of galvanising, the hot-dip galvanising treatment used for BINGO ZINC offers **unrivalled resistance** to hostile environments. At the same time, it ensures **the longest working life** for your truck.

BINGO ZINC. Galvanised to protect it from abrasion, scratching and denting.

Galvanisation produces a coating with different hardness and resistance properties. Zinc will become welded to steel atom by atom, and even if the coating layer were entirely damaged and scraped, it would still provide inherent electrochemical protection.

Hot-dip galvanising for outstanding etch-proofing results.

If your business is handling meat, fish, shellfish, cheese or vegetables, BINGO ZINC will prove your ideal helper.

BINGO ZINC is 100% food safe. It is corrosion-resistant. It is also blood- and salt-resistant. It is rust-proof. And to top it all, it is fitted with food-grade hydraulic oil and grease to prevent any possible contamination risks.

BINGO ZINC. The easiest way to perfect compliance with HACCP standards.

Food processing and food service companies will find a perfect partner in BINGO ZINC to achieve compliance with HACCP systems requirements (concerning food hygiene and safety). BINGO ZINC is perfectly food-safe and also extremely handy and comfortable for the operator.

AISI 316 STAINLESS STEEL components
and water-tight protection of all electric parts.

BINGO ZINC also offers all the advantages of MONTINI products.

Complete range.

3-wheel models, with load capacities up to 1800 kg.

4-wheel models, with load capacities up to 4000 kg.

AC electronic system.

The twin-motor traction and lift motor with MONTINIplus electronic technology in Alternating Current (AC) offer great benefits:

- maintenance-free;
 - reduction of truck maintenance and operating costs;
 - greater reliability and efficiency;
 - greater motor performance;
 - longer battery autonomy;
 - no emission of pollutants into the atmosphere, respecting environmental quality.
- Plus, great ease of access to the systems.

GA versions. Great Autonomy for maximised working life.

BINGO ZINC can be equipped with high capacity batteries to work for longer without any autonomy issues.

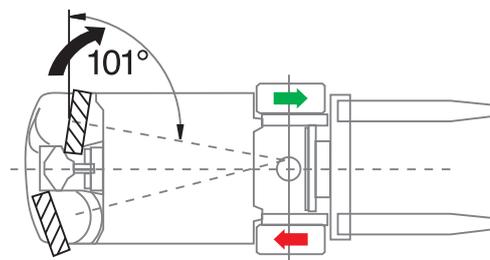

MONTINI Super Steering System.

For steering in unimaginable spaces.

Rear steering axle up to 101°. Standard.

Advantages:

- an unbeatable turning radius;
- an unbeatable stacking aisle width;
- the ideal solution for maximum steering and working efficiency in the narrowest spaces.
